➤ **Functional Overview**

FTPretty connect to the computer where the client installed the FTPretty Server, later the client must register to our database, which it installed in our corporation server. Once, this process is finished, the user must authenticate correctly. If the authentication process is correct, the user can explorer the directories of his mobile device and his pc, and do other functions like, sharing files to other Android applications, opening the mobile files, uploading and downloading files, or deleting those files.

➤ **Advantages**

- Privacy: Our company don't save any copy of the user files, and we can't access them. Without middlemen, we only give to the user the tools to share files, and the user privacy remains intact.
- Prize: FTPretty is totally free, without any cost type.
- Storage: With FTPretty the space isn't a problem. You forgot to pay expensive subscriptions for capacity. With FTPretty you set the limit, so the storage depends on the space which you have available in your computer and mobile device.
